

Practice Code Number Application Form EMERGENCY MEDICAL SERVICES – ALS / AMS CRITERIA

ADVANCED LIFE SUPPORT/AEROMEDICAL SERVICE

Combination of MICU Transfers and ALS AND MICU categories (Neonatal MICU Transfers.)

This document is to be submitted together with the Application form; supporting documents and completed questionnaire to pcns_admin@bhfglobal.com

This level of patient transfer and treatment refers to a seriously ill or injured patient requiring invasive medical intervention and continuous advanced life support medical care. If required intensive care management and transportation may also be offered for the transfer by road or air from or to an intensive care unit of a critically ill or injured patient requiring continuous advanced life support medical care.

SPECIFIC REQUIREMENTS

1. Vehicles (please be advised that the requirements stated below apply to all vehicles that are made use of as ambulances):
1.1. The ambulance must be configured in such a way that the medical personnel have complete access to a patient in order to begin and maintain life support
1.2. The ambulance must be fitted with a two-way radio or cellular communication system or a combination thereof which allows for communication at all times with the dispatch centre
1.3. The ambulance must be fitted with red warning lights that must be visible from the front, rear, and both sides of the vehicle at all times, and a siren in accordance with the relevant vehicle registration and safety legislation
1.4. The ambulance must display the word "Ambulance" on the front and rear of all ambulances and must adhere to the following minimum dimensions: 600mm X 150mm; or large as possible proportionate to the make of the vehicle
1.5. The ambulance must be configured in such a way that the interior of the patient compartment, excluding the driver's cab section, must be a minimum of- a. height 1222mm. b. width 1333mm. c. length 1900mm;
1.6. The ambulance must be configured in such a way that adequate, permanently installed lighting is provided in the patient compartment
1.7. The ambulance must have installed within the ambulance a minimum of a 2 000-watt electrical inverter, capable of providing a 220-volt power supply to the patient treatment compartment of the vehicle
1.8. The ambulance must have an adequate entry that allows for the loading and off-loading of the patient without compromising the condition of the patient
1.9. The ambulance must be configured in such a way that a patient can be carried in the supine position with specialised medical equipment fitted
1.10. The ambulance must have an approved restraining device fitted for all patients and emergency care personnel
1.11. The ambulance must have a stretcher restrained with a restraining device, approved by the manufacturer of the stretcher, which shall be permanently fitted to the vehicle and shall restrain both the front and rear of the stretcher
1.12. The ambulance must have a stretcher that is secured in such a way that it allows medical personnel a clear view of, and access to, the patient and specialised medical equipment
1.13. The ambulance must have a stretcher that is fitted in such a way that it does not block the entry or emergency exits of the vehicle
1.14. The ambulance must have a stretcher that is fitted in such a way that it does not block access to the airway of the patient and in such a way that the performance of advanced airway techniques will not be hindered

1. Vehicles (please be advised that the requirements stated below apply to all vehicles that are made use of as ambulances):
1.15. The ambulance must be configured in such a way that medical equipment and medical gas cylinders are secured in brackets that are attached to the body of the vehicle and do not allow any vertical or horizontal movement of the medical equipment or medical gas cylinders within the compartment of the ambulance
1.16. The ambulance must be configured in such a way that medical equipment and medical gas cylinders are fitted in such a way that they do not obstruct the entry or emergency exits of the vehicle or pose a potential threat to personnel or patients
1.17. The ambulance must have medical gas cylinders and outlets marked in accordance with SANS Codes of Practice and that have been subjected to visual and hydrostatic inspection by a Department of Labour-approved testing facility
1.18. The ambulance must have an adequate supply of convenient hanging devices that are fitted for intravenous therapy - such must be fitted in such a way as not to inflict injury to patients or medical personnel
1.19. The ambulance must have a patient compartment that is lined with a non-porous material to avoid blood and other body fluids from contaminating the area and allows for the cleaning of the compartment
1.20. The ambulance must have surfaces and equipment within the ambulance free from the visible appearance of any and all contaminants including but not limited to dust, dirt, blood, faeces, urine, vomit, human tissue, or any other bodily fluid
1.21. The ambulance must have a patient compartment separated from the driver compartment in such a way that the patient, treatment of the patient, and actions of the patient must in no way interfere with the driving of the vehicle
1.22. The ambulance must in the case of a vehicle with a gross vehicle mass that exceeds 3 500kg, be fitted with retro-reflective red and retro-reflective yellow chevron strips on the rear of the vehicle, as required by the National Road Traffic Act
1.23. The ambulance must in the case of a vehicle with a gross vehicle mass that exceeds 3 500kg, be fitted with yellow, retro-reflective strips to both the sides of the vehicle as well as the rear of the vehicle, in addition to the chevron, which must be fitted no more than 600mm from the lower part of the body of such vehicle, as required by the National Road Traffic Act
1.24. The ambulance must be registered as an 'Ambulance' with the relevant authorities according to existing Acts, ordinances, or regulations.

2.2.14. Gum Elastic Bougie	1	1	0	1
2.2.15. Magill forceps - adult	1	1	1	1
2.2.16. Magill forceps - paediatric	1	1	1	1
2.2.17. 10ml syringes	1	1	0	1
2.2.18. 20ml syringes	2	2	0	2
2.2.19. Pair sharp, clean scissors	1	1	0	1
2.2.20. 1m Tape / ET tube securing device	2	2	0	2
2.2.21. Water soluble lubricant gel	2	2	0	2
2.2.22. Heimlich type Flutter valves	2	2	0	2
2.2.23. Heat moisture exchanger valve for ventilated patients	1	1	0	1
2.3. Breathing / Ventilation Equipment				
2.3.1. Adult oxygen masks providing 40% inhaled oxygen with tubing	4	4	4	4
2.3.2. Adult non-rebreather masks providing 100% inhaled oxygen with tubing	2	2	2	2
2.3.3. Adult oxygen nebuliser masks including tubing and fluid reservoir	2	2	2	2
2.3.4. Nasal cannula with tubing	2	2	2	2
2.3.5. Paediatric oxygen masks providing 40% inhaled oxygen with tubing	2	2	2	2
2.3.6. Paediatric non-rebreather masks providing 100% inhaled oxygen with tubing	2	2	2	2
2.3.7. Paediatric oxygen nebuliser masks including tubing and a fluid reservoir	2	2	2	2
2.3.8. Oxygen T-Piece with tubing	2	2	2	2
2.3.9. Adult Bag-Valve-Mask with Reservoir and adult mask (size 4)	1	1	1	1
2.3.10. Paediatric Bag-Valve-Mask with Reservoir and paediatric mask (size 1)	1	1	1	1
2.3.11. Neonatal Bag-Valve-Mask with Reservoir and neonatal mask (size 0)	1	1	1	1
2.3.12. Oxygen Humidification Device	1	1	0	1
2.4. Oxygen Supply				
2.4.1. Minimum of a portable oxygen cylinder. Size "D"	2	2	2	2
2.4.2. Portable oxygen cylinder gauge with flow meter	1	1	1	1
2.4.3. Fitted oxygen cylinder/s, size "F" capable of supplying a minimum of 30 minutes of oxygen at a flow rate of at least 15 liters per minute	2	0	0	2
2.4.4. Fitted oxygen cylinder gauge with flow meter	1	0	0	1
2.5. Ventilator				
2.5.1. Mechanical volume cycled ventilator with PEEP valve & pressure relief valve, with appropriate fitting allowing connection to fitted oxygen supply within the ambulance, including the following features (requires annual calibration certification):	1	1	0	1
Volume and pressure control				
Volume				
Inspiratory Pressure

6. Minimum Personnel Requirements for Advanced Life Support Ambulance per shift (NB Refer to the latest 2017 EMS Regulation)

Personnel for Advanced Life Support Ambulance	Minimum Quantity (per vehicle)
Basic Ambulance Assistant (BAA)	2
Ambulance Emergency Assistant (AEA)	2
Paramedics (ANT / ECP HPCSA registered staff only)	2

Additional personnel

- 1 Medical Practitioner with an active practice number.
- 1 Emergency Medical Service Manager | who is qualified in at least Ambulance Emergency Assistant or higher qualification at HPCSA
- State registered Nurse with SANC with approved Neonatal training in addition to ALS staff i.e. CCA/Paramedic (Optional)

All staff members above are required to have valid PDP's.

The patient attendants shall be advanced live support qualified and registered (i.e. CCA or Nat. Dip. AEC) with the HPCSA. It is recommended that the ALS patient attendants be assisted by a minimum Ambulance Emergency Assistant.

In the event of an ICU transfer the patient attendant/s shall be Advanced Life Support qualified and registered with HPCSA, alone or in addition to an ICU trained Registered Nurse with the SANC approved ICU training.

There shall also be a consulting registered Medical Practitioner, available 24 hours per day, for medical advice or intervention by radio, telephone or on scene intervention. It is highly recommended that the registered Medical Practitioner hold currently valid ATLS / ACLS/ PALS or (APLS) certificates or equivalent.
